

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (Original) A liquid transfusing tube comprising:
a tube constituting a liquid transfusing channel;
a connector provided at one end part of said tube; and
a connection part provided on the other side of said tube and connected to the side of a containing part containing a transfusion; wherein
said connector includes a male connector and a female connector, and the axis of said male connector and the axis of said female connector substantially coincide with each other.
2. (Canceled)
3. (Original) The liquid transfusing tube as set forth in claim 1, wherein said connector has a channel changeover function for changing over the channel.
4. (Original) The liquid transfusing tube as set forth in claim 1, wherein said connector is so configured that the communication pattern among the inner cavity of said tube, the inner cavity of said male connector, and the inner cavity of said female connector can be selected.

5. (Currently Amended) A liquid transfusing tube set comprising:
at least one liquid transfusing tube as set forth in ~~any of claims 1, 3, and 4~~
claim 1, and
a liquid dosing part for dosing a patient with said transfusion, said liquid dosing
part having a liquid dosing part side connector capable of being connected to one of
said male connector and said female connector of said connector of said liquid
transfusing tube; wherein
in the condition where one of said male connector and said female connector of
said connector of said liquid transfusing tube and said liquid dosing part side
connector of said liquid dosing part are connected with each other, the other of said
male connector and said female connector of said connector of said liquid
transfusing tube can be connected to a liquid transfusing tube other than said liquid
transfusing tube.
6. (Original) The liquid transfusing tube set as set forth in claim 5,
wherein said liquid dosing part has a bacteria-removing filter.
7. (Original) The liquid transfusing tube set as set forth in claim 6,
wherein said bacteria-removing filter is provided on the downstream side relative to
said liquid dosing part side connector.
8. (Currently Amended) The liquid transfusing tube set as set forth in
claim 6 ~~or 7~~, wherein said liquid dosing part has a mixing injection port on the
downstream side of said bacteria-removing filter.

9. (Currently Amended) The liquid transfusing tube set as set forth in ~~any of claims 5 to 8~~ claim 5 , wherein the other end side of a tube having on its one end side a connection part connected to a liquid container is connected to said liquid dosing part side connector.

10. (Currently Amended) The liquid transfusing tube set as set forth in ~~any of claims 5 to 8~~ claim 5, wherein said liquid dosing part side connector is branched into a plurality of parts so that a connector provided on the other end side of a tube having on its one end side a connection part connected to another liquid container other than said liquid container and said connector of said liquid transfusing tube can be simultaneously connected.
